                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is human interleukin-15 (IL-15) DNA coding sequence located on chromosome 4q31. The polymorphic variants of IL-15 genes are useful for studying the expression and function of IL-15 and expressing
gastroenteritis, colitis, inflammatory bowel disease and villus atrophic disorders. Chemotherapy and radiotherapy associated enteritis (gut toxicity) results in bleeding and sepsis due to gastrointestinal flora entering the blood, and thus can limit the dosage of therapeutic agent administered to a cancer patient. ETF may therefore be used to increase the tolerated doses radiotherapy and chemotherapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel polynucleotides comprising one of 11, PS1-PS11, single nucleotide polymorphisms in human interleukin-15 gene, and useful for treating disorders affected by expression of function of interleukin-15 isogene

IL-15 protein for use in screening for candidate drugs to treat diseases related to IL-15 activity. Genotyping or haplotyping an individual at the novel IL-15 activity. Genotyping or haplotyping an individual at the novel IL-15 potymorphic sites are useful for studying population.

diversity, anthropological lineage, the significance of diversity and inneage of the phenotypic level, paternity testing, forensic applications and for identifying associations between IL-15 genetic variation and a trait, so trait such as level of drug response or susceptibility to disease.

CC Infections as sociation between a genotype or haplotype and a trait, is useful for developing diagnostic tests and therapeutic treatments for infections, human immundeficiency virus and T-cell liukaemia. The dentification of an association between a clinical response and a diagnostic method to determine those individuals who will or will not respond to the treatment, or alternatively, will crespond at a lower level and thus may require more treatment, i.e. a greater dose of a drug. The genotyping or haplotyping methods are also useful for developing quugs targetting IL-15. The genotyping and haplotyping methods are also useful for developing arguetting IL-15. The genotyping and suspension of function of novel IL-15 isogene and also in gene therapy. Expression of an IL-15 isogene may be turned off by transforming the expression vector that expression vector cut that expression vector cut is that expression vector coll population of an expression vector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Epithelium-derived T-cell factor; ETF; simian; human; enteritis; gastrointestinal disease; mucositis; peptic ulcer; cytostatic; villus atrophic disorder; inflammatory bowel disease; antiinflammatory; anti-HIV; antiviral; T-lymphocyte stimulator; ss.

factor (ETF) polypeptides. Antibodies that specifically bind to the polypeptides are used for treating or preventing gastrointestinal biolypeptides are used for treating or preventing gastrointestinal diseases, such as chemotherapy and radiation therapy-induced enteritis and mucositis, peptic ulter disease, villus atrophic disorders and inflammatory bowel disease; for increasing tolerated doses for radiation therapy and chemotherapy agents which are limited by gastrointestinal toxicity; and for treating HIV and HIV-associated diseases. The antibodies are further used to treat a variety of other diseases or conditions where it is desired to stimulate proliferation of T-lymphocytes and B lymphocytes, or the secretion of immunoglobulin B lymphocytes, to augment anti-infectious disease immunity, to induce CTL. LAM or NR lytic activity, or to augment the destruction of tumour cells or cells infected with virus. The present sequence represents a cDNA encoding the similan ETF (SETF) polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             67 AGTCATTTTCTAACTGAAGCTGGCATTCATGTCTTCATTTTGGGCTGTTTCAGTGCAGGG 126

The present sequence describes an isolated RNA molecule which specifically cleaves mRNA encoding interleukin 15 (IL-15). The enzymatic RNA molecules can bind to and cleave mRNA encoding IL-15. They can be used for treating disorders associated with IL-15 such as inflammatory disorders, e.g. rheumatoid arthritis by inhibiting the synthesis of IL-15 in lymphocytes and preventing the recruitment and activation of macrophages. They can also be used to develop transgenic animals which can be used to identify the impact of increased or decreased IL-15 levels on a particular pathway or phenotype. The present sequence represents a human IL-15 DNA sequence.

The present invention describes low adenosine (A) courent antisense coligonuclectides and compositions (I) comprising them. In the antisense coligonuclectides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antiinflammatory, analgesic, communosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with a activity disorders and malignancies, such as stimulating and conversation and or activity of target polypeptides associated with a certivating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system peptide receptors, binding proteins and malignancy associated proteins. The receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary passociated with a disease or condition selected from pulmonary use pulmonary distress syndrome (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary infection, emphysema, choron observed respiration, respiratory distress syndrome from the and antisense oligonucleotides used in the exemplification of fragments and antisense oligonucleotides used in the exemplification of
                                                                                                                                                                                                                                                                                                                     Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              67 AGTCATTITCTAACTGAAGCTGGCATTCATGTCTTCATTTTGGGCTGTTTCAGTGCAGGG 126

The invention relates to antisense oligonuclectides (AAA58045, AAA58047-AA58057) capable of inhibiting the expression of human interleukin-15 (IL-15) by Mybridising to IL-15 mRNN (AAA58044). IL-15 is a member of the short chain, 4 alpha helix bundle cytokine family and is a potent T-cell growth factor and activator. IL-15 acts as a stimulator of various T-cell mediated pathological immune responses, such as uctoimmune disorders (e.g., rheumatoid arthritis, graft versus host disease and organ transplant rejection), and has a proinflammatory role in rheumatoid arthritis synovitis. The antisense oligonucleotides are alleviating inflammatory polyarthopathy associated with rheumatoid arthritis, organ transplant rejection (e.g., kidney transplant rejection, cell transplant rejections, asthma, lupus erythematosus and inflammatory bowel disease. The present sequence represents a cDNA copy of human IL-15 mRNA.
                                                                                                                            Human interleukin-15; IL-15; antisense therapy; expression inhibition; T-cell mediated immune response; autoimmune disorder; inflammatory polyarthropathy; rheumatoid arthritis; transplant rejection; graft versus host disease; lupus erythematosus; asthma; inflammatory bowel disease; gene therapy; immunosuppressive;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antisense oligomer useful for alleviating inflammatory polyarthopathy associated with organ and cell transplant rejection, inhibits production of interleukin-15 by hybridizing to its mRNA -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1202 BP; 355 A; 219 C; 249 G; 379 T; 0 other;
                                                                                             Human interleukin-15 (IL-15) cDNA copy of mRNA.

the present invention describes a new composition comprising and cartisense oligonuclectide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammation, allergies, and/or antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, meful printing lung diseases and diseases whose secondary effects affilict the lungs of a subject. They can be used for treating e.g. ischammic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the conchoconstriction and inflammation. AAA33313 to Parsent the nucleotide sequences given in the sequence listing from the present increase of decoyademosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA33313 to AAA53312 represent increation, which activates adenosine significant in the sequences are also called SEQ ID NO:1 to 185, but the sequences are also called SEQ ID NO:1 to 185, but the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                antiallergic; antiasthmatic; cytostatic; analgesic; impaired airway; lung disease; ischaemic condition; pulmonary vasoconstriction; asthma; respiratory distress syndrome; pain; cystic fibrosis; emphysema; pulmonary hypertension; chronic obstructive pulmonary disease; COPD; cancer; leukaemia; lymphoma; carcinoma; metastasis; ss.

in vivo or ex vivo. The antisense oligonucleotides of the invention are specific for interleukin-15 (IL-15), and can be delivered exogenously or can be expressed from DNA or RNA vectors. This sequence encodes the human IL-15 protein.

ulcerative colitis and cell proliferative disorders.

The products of the invention have anti-ILIS, anti-inflammatory, hepatotropic, anti-arthritic, neuroprotective, antiproliferative and antiulcer activity and can be used for gene therapy. The antisense oligonucleotides are used to inhibit interleukin-15 (IL-15) expression and production, and prevent the recruitment and activation of macrophages. They are used to irrat diseases associated with an increased expression of IL-15. Such diseases anticlude inflammatory disorders, such as inflammatory bowel diseases, arthritis, cirrhosis, multiple sclerosis, chronic liver disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             IL-15; interleukin.15; human; anti-II15; anti-inflammatory; hepatotropic; anti-arthritic; neuroprotective; antiprollferative; antiulcer; antisense; gene therapy; macrophage; inflammatory disorder; boval disease; arthritis; cirrhosis; multiple sclerosis; chronic liver disease; ulcerative colitis; cell proliferative disorder; treatment; ss.
(AAA32323 to AAA33992) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences given in the sequence listing.

In the antisense oligonuclectides the A is replaced by a 'Universal' or alternative base.

(I) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and mailgnancies, such as stimulating and activating peptide factors and transmitters, transcription factors,

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides and compositions (I) comprising them. In the antisense (I) can have respiratory, bronchodilator, antifilammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lungivespiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodods, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adenosine molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, central chemokine receptors, adenosine receptors, bradykinin receptors, central contracts.

Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions -

receptors, ONS and peripheral nervous and non-nervous system peptide transmitters, defensins, growth factors, vasoactive peptides and transmitters, defensins, growth factors, vasoactive peptides and antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or lung inflammation, allergy(les) and/or bronchoconstriction) and/or lung inflammation, allergy(les) and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation.

Condition selected from pulmonary vasoconstriction, inflammation, hypertension, emphysema, chronic obstructive pulmonary distress syndrome (RDS), pain, cystic fibrosis (CF), allergic thinitis (AR), pulmonary hypertension, emphysema, chronic obstructive pulmonary distress syndrome conduct transplantation rejection, pulmonary infections, bronchitis, and/or cancer. AART8434 to AARZ1643 represent human polynucleotide

the present invention.

The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleals acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, sathma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasists to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the release of decyydenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA33313 to AAA33312 represent the nucleotide sequences given in the sequence listing from the present invention, which correspond to SEO ID NO: 11 to 1680 (AAA3323) to AAA33323 to AAA33323 to AAA33332 are also called SEO ID NO: 10 to 185, but the sequences differ from the previously named sequences. SEO ID NO: 11 to 1680 (Invention do not match up with their corresponding SEO ID NO: sequences given in the sequence listing.

The invention relates to antisense compounds that are targeted to a 5' or 3' untranslated region (5'0TR or 3'0TR) of a nucleic acid molecule encoding human interleukin-15 (LL-15), and inhibit the expression of human IL-15. The antisense inhibitors are is useful for inhibiting expression of IL-15 in human cells or tissues in vitro, for treating humans or other animals suspected for having or being prone to a disease associated with IL-15 expression, e.g. inflections, inflammation or tumours. The inhibitors can also be used for research or diagnostic purposes. Using antisense compounds specifically and effectively inhibits IL-15 function.
                                                                                       Interleukin-15; IL-15; antisense inhibitor; untranslated region; 5'UTR; 3'UTR; human; infection; inflammation; therapy; diagnosis; ss.
                                                                                                                                                                                                                                                                                                                                                                                      Antisense compound useful for inhibiting human interleukin-15 expression useful for treating diseases associated with interleukin-15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          130 CCTAAAACAGAAGCCAACTGGGTGAATGTAATAAGTGATTTGAAAAAATTGAAGATCTT 189

New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstriction, inflammation, allergies, asthma, hypertension, bronchitis, emphysema, respiratory distress syndrome, ischemia or cancers

Disclosure; Page 1264–1268; 1343pp; English.

targets nucleic acids inventions a new composition comprising an targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The Own can have antiinflammation, allergies, and/or inflammation. The Own can have antiinflammation, allergies, and/or antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impedired airways, including lung disease and diseases whose secondary e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fubrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONS reduces side effects. The A-containing ONS break down with the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the nucleotide sequences given in the sequence listing from the present libs sequences are also called SEO ID No: 1 to 185, but the sequences differ from the previously named sequences. Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions -

Disclosure; Page 1348-1349; 1592pp; English.

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antilinflammatory, analogsic, manuscuppressive, antiasthmatic, hypotensive and cytostatic activities. Comparisons of the antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with antisense oligonucleotides and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors. Communoglobulins and antibodies, antibody receptors, cytokines and activating proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, central chemokine receptors, adenosine receptors, bradykinin receptors, central cervous system (NS) and peripheral nervous and non-nervous system receptors, adenosine receptors, brading proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or thing inflammation, allergy(les) and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation, allergy(s) pain, cystic fibrosis (CF), allergic rhintis (AR), pulmonary hypertension, emphysema, chronic obstructive pulmonary bronchitis, bronchitis, bronchitis, bronchitis, bronchitis, bronchitis, The present invention describes low adenosine (A) content antisense

New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstriction, inflammation, allergies, asthma, hypertension, bronchitis, emphysema, respiratory distress syndrome, ischemia or

Disclosure; Page 1264; 1343pp; English.

The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which inflammation anteleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, affects affilict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive

```
ö
pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, acarcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONS break down with the release of deoxydenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA33131 to AAA35131 represent the uncleotide sequences juven in the sequence listing from the present throughout, which correspond to SEO ID NO:1 to 2815, but the sequences are also called SEO ID NO:1 to 185, but the sequences differ from the previously named sequences. SEO ID NO:1 to 1680 (AAA32323 to AAA3392) are specifically claimed ONS from the present invention on N. B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEO ID NO: sequences given in the sequence listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     - which

A simian species of IL-15 (sIL-15) was purified and its AA sequence analysed (see AAR83309, AAR83436, AAT00524, AAT00525). Both the simian and the human ORFs encode a precursor polypeptide (AAR8436, AAR83438). The precursor polypeptide (AAR8436, AAR8438). The precursor polypeptide (AAR8436, AAR8438). The active encoding mature simian or human IL-15 polypeptides are disclosed in AAR83309 & AAR83310 respectively. The invention also comprises other mammallan IL-15, including human IL-15, that hybridise to probes defined by AAR83438. A plasmid contg. a recombinant clone of human IL-15 convavas and a recombinant clone of human IL-15 convavas and a recombinant clone of human IL-15 in the deposit was named 141-hETF. AAR8315 is a mammallan mature IL-15 polypeptide. It is a generic sequence which encompasses both AAR83309 (simian) and AAR83310 (human) IL-15 mature polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New antibodies that specifically binds epithelium-derived T-cell factor polypeptide useful for e.g. treating or preventing gastrointestinal

                                                                                                                                                             The invention relates to simian and human epithelium-derived T-cell factor (ETF) polypeptides. Antibodies that specifically bind to the ETF diseases, such as chemotherapy and radiation therapy-induced enterits and mucositis, peptic ulcer disease, villus atrophic disorders and inflammancy bowel disease; for increasing tolerated doses for radiation therapy and chemotherapy agents which are limited by gastrointestinal toxicity; and for treating HIV and HIV-associated diseases. The conditions where it is desired to stimulate proliferation of T-lymphocytes and B lymphocytes, to rube secretion of immorplobulin B lymphocytes, to augment anti-infectious disease immunity, to induce CTL, LAK or NK lytic activity, or to augment the destruction of tumour cells or cells infected with virus. The present sequence represents a CDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Low adenosine antisense oligonucleotide; phosphorothioate; allergy; human; airway disorder; bronchoconstriction; lung inflammation; businfactant depletion; respiratory; bronchodilator; antifilammatory; immunosuppressive; antiasthmatic; analgasic; hypotensive; cytostatic; respiratory obstruction; pulmonary obstruction; impeded respiration; surfactant hypoproduction; pulmonary vasoconstriction; asthma; RDS; respiratory distress syndrome; pain; cystic fibrosis; allergic rhinitis; pulmonary hypertension; emphysema; pulmonary transplantation rejection; chronic obstructive pulmonary disease; pulmonary infection; bronchitis;

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense coligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antiinfiammatory, analgesic, immunosuppressive, antiathmatic, hypotensive and cytostatic activities. CC The antisense oligonucleotides and (I) can be used to down-regulate the lung/respiratory disorders and mailgnancies, such as stimulating and cativating peptide factors and mailgnancies, such as stimulating and immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, immunoglobulins and antibodies, antibody receptors, cytokine and creeptors, adenosine receptors, transcription factors, chemokine receptors, adenosine receptors, budding proteins, adenosine receptors, budding proteins and non-nervous system peptide receptors, defensins, growth factors, vasociated proteins. The creeptors, budding proteins and mallinancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders and antisense oligonucleotides may be used in this way to treat disorders and and/or bronchoconstriction and/or lung inflammation, allergies, asthma, impeded respiratory vasoconstriction, inflammation, allergies, asthma, impeded respiratory vasoconstriction, allergies, asthma, impeded respiratory vasoconstriction, inflammation, allergies, asthma, impeded respiratory vasoconstriction, pulmonary discress syndrome (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary infections, bronchitis, and/or cancer. AAF18414 to AAF21541 represent human polyvucleotide the present invention
                                                       Low adenosine (A) content antisense oligonucleotides which do not
trigger adenosine receptors during metabolism, useful e.g. for treating
cancers and respiratory obstructions -
                                                                                                                                                            Disclosure; Page 1345-1348; 1592pp; English.

The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which cargets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease associated with inflammation, impaired airways, including lung disease associated with inflammation, impaired airways, including lung disease associated with inflammation, ceffects afflict the lungs of a subject. They can be used for treating e.g. ischamic conditions, pulmonary vasconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive culmonary disease (CODP), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including the order of prostate cancer. The reduction of the adenosine content of the one prostate cancer. The A-containing ONS break down with the release of deoxyadenosine which activates adenosine receptors causing nucleotide sequences given in the sequences listing from the prevent invention, which correspond to SEO ID NO:1 to 2815, and then present convention, which correspond to SEO ID NO:1 to 1885, but the sequences differ from the previously mammed sequences. SEO ID NO:11 to 1680 (AAA33232 to AAA33323 to AAA3332 to AAA33323 to AA

The present sequence is human interleukin-15 (IL-15) gene allele located on chromosome 4q31. The polymorphic variants of IL-15 genes are useful for studying the expression and function of IL-15 ade appression and function of IL-15 and expressing to IL-15 protein for screening for candidate drugs to IL-15 protein for screening for candidate drugs to IL-15 protein for screening for candidate drugs to IL-15 polymorphic sites are useful for studying propulation diversity, anthropological lineage, the significance of individual at the novel IL-15 polymorphic sites are useful for studying population and incapped of the phenotypic level, paternity testing, conversity and lineage of the phenotypic level, paternity testing, conversity and lineage of the phenotypic level, paternity testing, conversity and a trait such as level of drug response or susceptibility to disease. Identifying association between IL-15 genetic variation and a trait, is useful for developing diagnostic tests and therapeutic treatments for infections, human immunodeficiency virus and therapeutic treatments for infections, human immunodeficiency virus and therapeutic propore and a genotype or haplotype pair) for the IL-15 gene may be the basis for designing a diagnostic method to determine those individuals who will or will not respond to the treatment, or alternatively, will respond at a lower level and thus may require more treatment, i.e. a greater dose of a drug. The genotyping or haplotyping methods are also useful for developing drugs testing to the individual more controlled in the testing method are also useful for developing drugs testing to the formal controlled in dealgraing controlled in gene therapy. Expression of function of novel IL-15 stogene may be turned off or the long of the ingene therapy. Expression of an IL-15 isogene may be turned off or the long of the long of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel polynucleotides comprising one of 11, PSI-PS11, single nucleotide polymorphisms in human interleukin-15 gene, and useful for treating disorders affected by expression of function of interleukin-15 isogene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

for studying the expression and function of IL-15 and expressing

C IL-15 protein for use in useful for screening for candidate drugs to

treat diseases related to IL-15 activity. Genotyping or haplotyping an

individual at the novel IL-15 polymorphic sites are useful for studying

c diversity and lineage of the phenotypic level, patentity testing,

c diversity and lineage of the phenotypic level, patentity testing,

c forensic applications and for identifying associations between IL-15

genetic variation and a trait such as level of drug response or

cs usceptibility to disease. Identifying an association between a genotype

cor haplotype and a trait, is useful for developing diagnostic tests and

therapeutic treatments for infections, human immunodeficiency virus and

cor haplotype and a genotype or haplotype (or haplotype pair) for the IL-15

gene may be the basis for designing a diagnostic method to determine

c response and a genotype or haplotype (or haplotype pair) for the IL-15

gene may be the basis for designing a diagnostic method to determine

those individuals who will or will not respond to the treatment,

c alternatively, will respond at a lower level and thus may require more

treatment, i.e. a greater dose of a drug. The genotyping or haplotyping

methods are also useful for therapeutic purposes for treating

c methods are also useful for therapeutic purposes for treating

c disorders affected by expression of function of novel IL-15 isogene and

c also in gene therapy. Expression of an IL-15 isogene may be turned off

by transforming a targetted organ, tissue or cell population of an

c hand is account that expresses high levels of untranslatable mRNA for

the contract of the pagented organ, tissue or cell population of an

The invention relates to human breast cancer expressed polynucleotides (AALO7544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and
                                                                                                       The invention relates to human breast cancer expressed polynucleotides (AAL07544-AAL26789) and methods of assessing whether a patient is affilicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells.
                                                                                                                                                                     The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded
                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                    polypeptides are also useful for isolating compounds with cytostatic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to human breast cancer expressed polynucleotides (AALO7544-AAL26789) and methods of assessing whether a patient is affilicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast calls. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic
potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New peptide useful as a marker for the diagnosis of breast cancer

invention have anti-Lis, anti-inflammatory, hepatotropic, invention have anti-Lis, anti-inflammatory, hepatotropic, anti-inflammatory, hepatotropic, anti-inflammatory, hepatotropic, anti-inflammatory, hepatotropic, and can be used for gene therapy. The antisense oligonucleotides are used to inhibit interleukin-15 (IL-15) expression and production, and prevent the recruitment and activation of macrophages. They are used to treat diseases associated with an increased expression of IL-15. Such diseases architis, cirrhosis, multiple sclerosis, chronic liver disease, ulcerative colitis and cell proliferative disorders. The treatment may be in vivo or ex vivo. The antisense oligonucleotides of the invention expecipic for interleukin-15 (IL-15), and can be delivered expressed from DNA or RNA vectors. ASSB709-288723 represent the antisense ligonucleotides distlemented of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes novel antisense oligonucleotides of 8-40 nucleic acids, targeted to interleukin-15 (IL-15). The products of the invention have anti-inflamatory, hepatotropic.

Invention have anti-inflamatory, hepatotropic, anti-arthritic, neuroprotective, antiproliferative and antiulcer activity and can be used for gene therapy. The antisense oligonucleotides are used to thibit interleukin-15 (IL-15) expression and production, and prevent the recruitment and activation of macrophages. They are used to treat diseases associated with an increased expression of IL-15. Such diseases include inflammatory disorders, such as inflammatory bowel disease.

Include inflammatory disorders, such as inflammatory bowel disease, arthritis, cirrhosis, multiple sclerosis, chronic liver disease, clearthis colitis and cell proliferative disorders. The treatment may be in vivo or ex vivo. The antisense oligonucleotides of the invention exogenously or can be expressed from DNA or RNA vectors. AA288709 288723 represent the antisense ligonucleotides disclosed in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            anti-arthritic; neuroprotective; antiproliferative; antiulcer; antisense; gene therapy; macrophage; inflammatory disorder; bowel disease; primer; arthritis; cirrhosis; multiple sclerosis; chronic liver disease; ulcerative colitis; cell proliferative disorder; treatment; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   IL-15; interleukin 15; human; anti-IL15; anti-inflammatory; hepatotropic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel antisense oligonucleotides targeted to interleukin-15 used to treat inflammatory diseases and cell proliferative diseases such as inflammatory bowel disease and chronic liver disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human IL-15 targetted antisense oligonucleotide HCL-103.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nozawa I;
